Multiplication Bingo

Equipment:

Pencils A set of tables squares

Rules:

This is a game for a whole class, getting them more familiar with a tables square and how to use it.

Each player circles 15 of the answers on a tables square.

The teacher then calls out tables questions such as: 4 times 6.

If a player has circled this answer they quickly cross it out, (or colour it in).

The winner is the first player to have crossed out all 15 numbers. He/she should call out the 15 winning multiplication sums.

(It is a good idea for the teacher to cross out the answers as they are called out to ensure that the winner has correctly marked his/her square.)
