## CARD TURNOVER

- This is a game for 2 players. You will need one or more decks of playing cards with the picture cards $(\mathrm{K}, \mathrm{Q}, \mathrm{J})$ removed. Ace $=1$.
- Shuffle the cards and divide them into two equal piles. Place face down.
- Players take it in turns to turn over the top card from each pile and multiply the two numbers.

For example, if the cards turned up were 9 and 4 then the problem becomes $9 \times 4$. The first player to call out the correct answer of ' 36 ' keeps the cards. If both players call out the correct answer at the same time, then they each take one of the cards. If answers are incorrect, the cards are put back at the bottom of the piles.

- Settle any disputes with a calculator.
- The winner is the player with more cards at the end.
- The rules of this game can be changed so that students need to - add the two numbers $9+4=13$
- subtract the lower number from the higher number $9-4=5$.
